Aerosol Cans

- Aerosol cans are used throughout BNL
- Some cans are labeled “Combustible” or “Flammable” because of the contents/propellant

Aerosol Cans

- Cans labeled Combustible and Flammable should be treated like flammable liquids:
 - Limit quantities
 - Use in ventilated area with ignition sources removed
 - Store in metal cabinets when not in use
 - Large quantities should be stored in flammable liquid lockers

Aerosol Cans

- Large quantities of flammable or combustible aerosols need special storage due to their rocketing and exploding nature.
 - For quantities greater than one carton:
 - Store within caged area or inside latched metal cabinets
 - Store within a building protected by automatic fire sprinklers
